Available in 1 litre pump pack

# BE SUNSMART

You cannot see or feel UV radiation. UV can be high even on cool and overcast days, so don't rely on clear skies and high temperatures to determine when you need to protect yourself from the sun. Extra care should be taken in the middle of the day when UV levels are most intense. Check the SunSmart UV Alert each day.

The SunSmart UV Alert lets you know the times each day you need sun protection. It can be found in the weather section of newspapers, online at [sunsmart.com.au](http://sunsmart.com.au), as a free smart phone app or as a free widget for websites.

**For the best protection, don't rely on sunscreen alone, use the five SunSmart countdown steps:**

## 5. SLIP ON SOME SUN-PROTECTION CLOTHING

Cover as much skin as possible.

## 4. SLOP ON SPF30+ SUNSCREEN

Make sure it is broad spectrum. Apply 20 minutes before going outside and reapply every 2 hours.

## 3. SLAP ON A HAT

Protect your face, neck, head and ears. Wear a broad-rimmed, legionnaire or bucket hat. Make sure the brim width is proportional to the size of your head and shades your face.

## 2. SEEK SHADE

Even while in the shade, UV radiation can reflect from surfaces such as water, sand and concrete so it is important to continue to wear a hat, appropriate clothing and sunscreen.

## 1. SLIDE ON SOME SUNGLASSES

Make sure they meet Australian Standards. Look for a label that says AS 1067 – preferably marked EPF (eye protection factor) 10.

## Did you know...

**How much sunscreen should you apply?** For an adult, the recommended application is 5ml (approximately 1 teaspoon full) for each arm, leg, body front, body back and face including neck and ears). That equates to a total of 35ml (approximately 7 teaspoons full) for a full body application.

**For a child,** the recommended full body application is about half that used for an adult (this will vary depending on the size of the child).

**How often should you reapply sunscreen?** Sunscreen should be reapplied at least every 2 hours.
